

El presente texto fue escrito con la finalidad de dar a conocer algunos metodos de biologia molecular, los cuales en la actualidad se usan para la produccion y comercializacion de proteinas, entre otros usos. Nuestro ensayo se enfoco en la clonacion de la proteina Interferon Gamma Humano, para lo cual se utilizo un vector de clonacion disenado para bacterias y se expreso en E. coli, siendo este, un sistema heterologo al homo sapiens; logrando asi la expresion de esta proteina en bacterias E. coli, las cuales proporcionan un sistema eficiente de produccion de proteinas, debido a su alta taza de crecimiento y esto se refleja en un alto rendimiento en un corto espacio de tiempo.

How To Get Smarter: How To Increase Your Brain Power And Intelligence (Smart Thinking,), The Home Remodel Maven: ...tells how to make your house the place you most want to be, Gardening in a Small Space, Adventures of Tommy Toad: Nothing to be Scared of: Adventures of Tommy Toad, Compensation of Voltage Sag and Swells by Custom Power Devices: Essentials & Applications, The Green Rising - An Historical Survey of Agrarianism, With Special Reference to the Organized Efforts of the Farmers of the United States to Improve Their Economic and Social Status,
